

Onboarding APIs:

Step 1	Participant Creation
APIs to be called	https://apisprod.nha.gov.in/pmjay/hcx/participantnxcxservice/v2/participant/create
Use case description	To Create the participant in the NHCX system.
Validations	• The registry type should be valid and one from the Valid Registry Enums directory provided. • The role should be valid and one from the Valid Role Enums directory provided. • The mobile number should be a valid one and is already registered in the system. -For Providers: The mobile number will be validated with the one recorded in the HFR and both should match for the call to be successful. -For Payers: The mobile number will be validated with the one recorded in the NHCX Payer details and both should match for the call to be successful. • The passcode will be sent the registered number after successful validation and the transaction id will be shared in the response; both can be further used for confirmation.
Request Payload	<pre>{ "registrytype":"10001", "registryid":"XXXXX74586", "role":["10001"], "endpointurl": "", "mobilenumber":"XXXX748348", "email":"" }</pre>
Response	<pre>{ "participantid": "XXXXX7583@hcx", "facilityname": "TEST Hospitals", "facilitycontact": "XXXXXXX452", "facilityemail": "sample@gmail.com", "transactionid": "1vouu8tlz2tnl-1fpnpjhwj07c6", "error": {</pre>

	<pre> "code": null, "message":null, "trace": null } } </pre>
Entity to Implement the API called	NHCX

Step 2	Participant Creation confirmation
APIs to be called	<a "&passcode="" href="https://apisprod.nha.gov.in/pmjay/hcx/participantcxservice/validate?transactionId=">https://apisprod.nha.gov.in/pmjay/hcx/participantcxservice/validate?transactionId=""&passcode=
Use case description	Confirm the request for the participant creation.
Validations	- Each trigger of the participant create API (Step 1) will generate new Transaction_id & Passcode will be sent to the registered mobile number. - The passcode is specific to each transaction_id and it's validated for confirmation.
Entity to Implement the API called	NHCX

Step 3	Participant Updation
APIs to be called	https://apisprod.nha.gov.in/pmjay/hcx/participantcxservice/v2/participant/update
Use case description	To update the participant details registered in the NHCX system.
Validations	- The Participant Code should be a valid Participant Code already registered in the NHCX system. (Creation confirmation also completed) - The certificate (public key) should be base64 encrypted.
Request Payload	<pre> { "participantcode": "XXXXXXXX934@hcx", </pre>

	<pre>"encryptioncert": "certificate in base 64", "endpointurl": "base url " }</pre>
Response	<pre>{ "participant_code": "XXXXX78934@hcx", "status": "", "transactionid": "1fdesnz05o61g-1dl43hc511j1g" }</pre>
Entity to Implement the API called	NHCX

Step 4	Participant Updation confirmation
APIs to be called	<a "&pa"="" href="https://apisprod.nha.gov.in/pmjay/hcx/participantncxservice/update/validate?transactionId=">https://apisprod.nha.gov.in/pmjay/hcx/participantncxservice/update/validate?transactionId=""&pa
Use case description	Confirm the request for the participant updation.
Validations	- Each trigger of the participant update API (Step 3) will generate new Transaction_id & Passcode sent to the registered mobile number. - The passcode is specific to each transaction_id and it's validated for confirmation. Note: transaction_id and passcode will be valid for 24 hours.
Entity to Implement the API called	NHCX

Note: In case the user has forgotten the transaction_id they need to create the request for creation or updation again.

Valid Role Enums :

PROVIDER("10001")

PAYER("10002")

AGENCY_TPA("10003")

AGENCY_REGULATOR("10004")

RESEARCH("10005")

MEMBER_ISNP("10006")
AGENCY_SPONSOR("10007")
HIE_HIO_HCX("10008")

Valid Registry Enums:

HFR ("10001")
NIN ("10002")
ROHINI(" 10003")
PAYER ("10004")

	Participant Certificate Updation
API to be called	https://apisprod.nha.gov.in/pmjay/hcx/participanthcxs-service/v2/update/cert
Description	To update the certificate of the participant without the passcode Validation.
Validation	Participant ID & Certificate are both mandatory. Note: The certificate should be encoded to base64.
Request Body	<pre>{ "participantId":"XXXX@hcx", "certificate":"base64" }</pre>
