

Dummy Payer

Participant ID: 1000003538@hcx

The below usecases can be tested using the dummy payer:

- Insurance Plan
- Coverage Eligibility
- Preauth
- Claim
- Payment Notice
- Communication

Insurance Plan:

Trigger the **v1/insuranceplan/request** API with proper payload & headers.

Please use **provider id as 32722** inside the FHIR bundle. and **policy number as 100217**(only applicable for dummy payer).

Coverageeligibility:

Trigger the **v1/coverageeligibility/check** API with proper payload & headers.

Preauth:

Step 1: **Trigger the v1/preauth/submit** API with proper payload & headers.

Step 2: Use the **/process/request** API to trigger the onSubmit from Payer side with the desired Action scenario (**Approve/Reject/Query**)

Step 3: **If the process is triggered as query**, The communication Request is triggered using **/communication/request** from the Payer's end, the claim/preauth is still with the payer.

Step 4: The provider must respond with the supporting documents by calling **/communication/on_request**.

Step 5: The payer will respond with the final adjudicated response for the given preauth request by calling **/preauth/on_submit** API.

Note: Steps 3 & 4 are applicable only in case of Query.

Claim:

Step 1: Trigger the **v1/preauth/submit API** with proper payload & headers.

Step 2: Use the **/process/request** API to trigger the onSubmit from Payer side with the desired Action scenario (**Approve/Reject/Query**)

Step 3: **If the process is triggered as query**, The communication Request is triggered using /communication/request from the Payer's end, the claim/preauth is still with the payer.

Step 4: The provider must respond with the supporting documents by calling /communication/on_request.

Step 5: The payer will respond with the final adjudicated response for the given preauth request by calling claim/on_submit APIs.

Note: Steps 3 & 4 are applicable only in case of Query.

Payment Notice:

Step 1: Use the **/paymentNotice/init** API to trigger the payment notice prompt from the Payer side to test the usecase.

Step 2: Send an acknowledgement.

Communication:

Step 1: Trigger the **v1/preauth/submit API** with proper payload & headers.

Step 2: Use the **/process/request** API to trigger the onSubmit from Payer side with the **Query as action**, the communication from the Payer side is auto triggered.

Step 3: Send a response to the Payer using **v1/communication/on_request** API.

Step 4: The provider must respond with the supporting documents by calling /communication/on_request to get the response back on /preauth/on_submit or claim/on_submit APIs.

CURL for Test Usecase Action API:

```
curl --location --request POST
'https://apisbx.abdm.gov.in/pmjay/sbxhcx/dummyhcxpayer/process/request' \
--header 'Accept: application/json' \
--header 'Content-Type: application/json' \
--header 'bearer_auth: Bearer {{token}}' \
--data-raw '{
  "action": "Approve", // Approve | Reject | Query
  "method": "Claim", // Preauth | Claim
}
```

```
"correlationId":"aed629f7-XXXX-XXXX-XXXX-2f225169e68c"
}'
```

CURL for Payment Notice Trigger API:

```
curl --location --request POST
'https://apisbx.abdm.gov.in/pmjay/sbxhcx/dummyhcxpayer/paymentNotice/init' \
--header 'Accept: application/json' \
--header 'Content-Type: application/json' \
--header 'bearer_auth: Bearer {{token}}' \
--data-raw '{
  "providerId":"XXXXXXXX@hcx",
  "claimNumber":""
}'
```
