

National health claim exchange

The National Health Claims Exchange works as exchange gateway that enables the transfer of health claim requests or responses from one entity to other (destination). Just as routing switches or email gateways ensure that messages are sent and received with the appropriate levels of consistency, security, privacy, and durability. National Health Claims Exchange serves as a protocol for exchanging claims-related information among various actors, including payers, providers, beneficiaries, regulators, and observers.

HCX Objectives

- Reduce receivable cycles and increase acceptance of cashless claims (even in smaller hospitals)
- Facilitate insurance innovation by enabling new processes/rules for auto adjudication, control fraud and abuse prevention.
- Standardized the claims process to reduce the operational overheads and increase the trust among payers and providers through a transparent and rule-based mechanism.
- Better patient experience

HCX Key Use cases

Use-Case Name	Description
Onboarding providers, payers	This functionality will be for onboarding providers and payers onto the NHCX platform to validate and route the request to target applications.
Check Coverage Eligibility	This functionality will be called by providers to check the eligibility of a beneficiary with the payors via NHCX.
Preauth Request Submission	This functionality will be called by providers to submit the Preauth Request of a beneficiary with the payors via NHCX. Payer application will implement the required logic to store the preauth request details and respond to the providers through NHCX with the adjudication details using on_submit callback API.
Predetermination Request Submission	This functionality will be called by providers to submit the Predetermination Request of a claim with the payors via NHCX. Payer application will implement the required logic to store the predetermination request details and respond to the proviers through NHCX with auto

	adjudication details against the policy and past history of the beneficiary using on_submit callback API.
Claim Request Submission	This functionality will be called by providers to submit the Claim Request of a beneficiary with the payors via HCX. Payer application will implement the required logic to store the Claim request details and submit the claim response (adjudication details) by calling the on_submit callback API.
Payment Notice	This functionality will be called by payers to submit the Payment status of a claim with the bank reference numbers such as scroll status along with UTR numbers.
Communication Request Submission	This functionality will be called by payers to communicate the remarks of a claim with the providers via HCX. Provider application will implement the required logic to store the communication details and respond to the payers with required information to process the claim.
Reprocess Request	This functionality will be called by providers to request payers to reprocess the claim when it is partially paid or rejected by the claim processing officer.
