

Policy Linking Process:

*Each and every payer has to create their own participant, irrespective of if they are under any TPA or not, **every payer will have an individual Participant Code(payerid).***

While linking the policies the below format should be followed.

*For individual payers the **payerid will be their participant code**, whereas if any payer is under any TPA in that scenario the **payer id will be the individual insurance company's participant code** and the **processingid will be the TPA's participant code**.*

Processing_ID is the TPA under which the insurance company is mapped.

*In future if there is any change like **the Insurance Company is moving from one TPA to another**, in that scenario the Participant has to **delink the existing policies and link back again passing the new TPA's participant code as the processing ID**.*

For Sandbox:

Request:

```
{
  "requestid": "e011c4a2-xxxx-xxxx-xxxx-50d06af51555",
  "abhanumber": "12345678910111",
  "mobilenumber": "1234567890",
  "memberid": "Cust00",
  "payerid": "XXXXXX@sbx",
  "processingid": "XXXXXX@sbx",
```

```

    "policies": [
      {
        "productid": "Prod01",
        "productname": "Active Asure"
      }, {
        "productid": "Prod02",
        "productname": "Life Insurance Policy"
      }
    ]
  }
}

```

Validation for De-Linking:

*The delinking process can only be done by the participant either mentioned in the **payerID** or the **processingID** during the Linking Process.*

The check at NHCX end:

*We will extract the client ID from the token during De-link and check if it matches with the one who registered the IC (**payerID**) or the TPA (**processingID**), if it matches then only, we will allow otherwise it will not allow to Delink with an error message.*

When trying to delink a Policy that is not there in the “policies” list, an error will be encountered with message “There is no policies with requested details”.
